

Connecting your people to things that matter

**User Interface UI and User Experience**  
Modern framework that extends into Digital Work and Knowledge Centre

**Relevant to the user**  
Optimises the delivery of content to specific issues and outcomes based on user roles

**Collaboration and Communication tools**  
Better decisions by connecting the right people with the right knowledge

**Single Source of Information**  
Indexing and virtualising information across multiple platforms without costly integration

Improved productivity through:  
Reduced training

Extended capability sets

Faster/improved decision making

**Business Process Tools**  
Guiding users through complex business processes by injecting information into workflows and decision tools

**Integrated Knowledge Base**  
Searches and presents information from organisation content and applications

## Knosys Knowledge Management Platform Delivers rapid productivity improvements across organisations

### Single Source Of Knowledge

Indexing and virtualising information across multiple platforms without costly integration  
Knosys provides consistent knowledge across the organisation and defines knowledge as a strategic asset  
Transformative technology concept tackling a task usually deemed impossible by large corporations

### Relevant to User

Information is presented relevant to roles and/or tasks in line with specific business objectives  
Increases productivity and efficiency, delivering better decision making and business outcomes

### Surrounded by Tools

Injects information into business process and workflows  
Guiding users through complex business processes  
Facilitates collaboration, feedback and optimisation

# The Knosys platform provides industry leading functionality

## INDEXING

**Virtual Knowledge Index** -Indexes and tags information in the platform and beyond into external and legacy systems. Avoiding the need to extract and storing a new instance of the data.

- Searches and presents information from organisation wide repositories.
- A light touch technology that is fast to deploy with minimal disruption to existing systems.

## BUSINESS PROCESS

**Business Process Flows and Guidance** - Facilitates improved decision making by guiding users through complex business processes by presenting information in a tiered and manageable form.

## COLLABORATION

**Collaboration tools** - Enabling employees to share information, identify experts and work through the task together, makes companies smarter and more productive.

## OPTIMISATION

**Reporting and Optimisation Tools** - Our learning engine allows knowledge delivered through our workflow tools to deliver appropriate content to the specific issues raised in order to be in line with broader business objectives.

- Driving continuous improvement for better decision making.

### Better business outcomes

- Measured 10% productivity increases
- Up to 30% increase efficiency against operational targets
- 40%+ increase in targeted sales results
